Pondless Waterfall Guide

The parts you have received can be used to create a waterfall.

The liner provided will be enough to create a small stream from the top of your waterfall to the bottom of your reservoir. There are no clear-cut dimensions for your reservoir and the shape of the stream is entirely up to you.

The pump will need to be situated in your reservoir and the hose/clips provided can be used to link your pump to the top of your waterfall or stream. We would recommend that the distance from the pump to the top of the waterfall is no longer than 10m long and 2m above the surface of the pond.

The heavy-duty grid and insert panel can be used to cover your reservoir so that you can hide it with plants, stones or other creative methods. Please do not place stones within the reservoir unless you have ensured the pump is unobstructed.

What you have received:

- Flexiliner Pond Liner
- Pond Fleece Underlay
- Heavy duty feature grid (with a separate insert panel)
- Pump, Hose and Clips
